

May 15 - Physiotherapists are Experts in Evaluating and Improving Movement and Function

Physiotherapists in BC provide care in 28 different areas of practice. Some that you may not be aware of include:

- Cardiovascular rehabilitation including pre/post cardiac surgery
- Cardiorespiratory conditions such as cystic fibrosis
- Hand therapy
- Vestibular rehabilitation for inner ear conditions like vertigo/dizziness
- Concussion
- Pool therapy
- Women's health including breast cancer, incontinence and osteoporosis

Increasing evidence is demonstrating the positive impact that physiotherapy can have on the health of our patients.
